PRODUCT INFORMATION

NOVOFLEX universal clamps are as helpful as a third hand and the ideal accessories for studio and nature photography. Use them to fix items safely and securely to things like panels, doors, tables, windows, pipes, branches, fences, ladders or tripod legs. Use them when you have no tripod to hand or when space is too tight to use one.

The clamps also make excellent car window tripods. All three clamps provide a screw-on fitting, offset at 90°, for ball heads, cameras, lights, flash units and accessories. They can be attached to bikes, canoes or sailing boats, making them indispensable in sports photography. The universal clamps do an equally good job in non-photographic situations. For example, two clamps combined with a Ball 19 can be used to position and fix light barriers or torches.

In product photography, a MicroPod, Ball 19 and universal clamp combine to form a flexible helper for positioning light panels, plates or objects.

APPLICATION EXAMPLES

UNIKLEM

The large universal clamp has two 1/4" camera studs offset by 90° and can be used for large and heavy ball heads. The rubber lining on the inside and underside of the clamp makes for gentle yet secure mounting on car windows. There's an extra 1/4" hole for attaching a support like a monopod (BB-Stock). The two knurled wheels offset by 90° make for fast mounting of cameras or ball heads.

UNIKLEM 42

The mid-sized universal clamp has maximum grip of 42 mm. It has two 1/4" tapped holes offset by 90° and a threaded stud.

UNIKLEM 26

With a maximum grip of 26 mm, the small universal clamp has many different uses, eg, on a small ball head on a tripod for ground-level photography. It has two 1/4" tapped holes offset by 90° and a threaded stud.
